Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

CITY OF ELY**Resolution No. 2007-23**

For the purpose of endorsing coal fired power generation facilities in Steptoe Valley, White Pine County, Nevada.

WHEREAS, the CITY OF ELY is an incorporated City within White Pine County, State of Nevada; and,

WHEREAS, the CITY OF ELY recognizes the need to upgrade the railroad that is owned by the CITY OF ELY and the cost of the upgrade, estimated to exceed 150 million dollars, will be borne by the generation facilities; and,

WHEREAS, the CITY OF ELY recognizes the need for economic stability that will be enhanced by the full time employment of an estimated 250 persons and tax revenues estimated at 50 million dollars in the first 10 years provided by these facilities; and,

WHEREAS, the CITY OF ELY supports the air quality levels that will be provided through the use of modern technology at the generation sites; and,

WHEREAS, the CITY OF ELY supports the construction of the power transmission lines that are part of the overall project, estimated to be 600 million dollars, which will enable the power transport of potential renewable energy facilities; and,

NOW, THEREFORE, be it resolved that the CITY OF ELY, through its City Council hereby endorse coal fired power generation facilities to be located near the City in Steptoe Valley, White Pine County, Nevada and the related upgrade of its railroad asset.

Resolved by the following vote by the City Council on October 25, 2007.

RE: Ely Energy Center Environmental Impact Statement (EIS)
Invitation to be a Cooperation Agency

Dear Mr. Weeks:

The Elko County Board of Commissioners reaffirms its strong support for a favorable EIS to allow Nevada Power Company and Sierra Pacific Power Company to construct the Ely Energy Center to be located in White Pine County, Nevada.

The coal-fired steam electric generating units, rail improvements and associated structures will have state-of-the-art emission control equipment to control plant emissions. Approval of the proposed project will benefit both the local White Pine County and Elko County economies. We also feel that the rail improvements will have a positive economic impact on the Northeastern Nevada Regional Railport facility that will be in operation near Elko in the near future. We believe this project will not have a noticeable impact upon the environment in Northeastern Nevada. Elko County believes this project is appropriate for Eastern Nevada and that it will help provide electric power production needs in our State.

Due to resource and personnel time constraints, Elko County declines your invitation to be a Cooperation Agency on this EIS at this time. However, Elko County offers to assist in any specific requests during the EIS development in support of this project.

Sincerely,

Robert K. Stokes
Elko County Manager

RE: Sierra Pacific Resources Company
Draft Class 1 Air Quality Operating Construction Permit

Dear Mr. Vega:

The Elko County Board of Commissioners supports the issuance of the **Sierra Pacific Resources Company - Class 1 Air Quality Operating Permit** to construct a Power Plant Project to be located White Pine County, Nevada.

The two nominal 750 MW coal-fired boilers and associated structures will have state-of-the-art emission control equipment to control plant emissions. Approval of the proposed permit will benefit the local White Pine County economy and will not have a noticeable impact upon air quality in Northeastern Nevada. Elko County believes this project is appropriate for Eastern Nevada and that it will benefit electric power production needs in our State.

Sincerely,

Mike Nannini, Chair
Elko County Commission

McGill Town Council

R.O. Box 1334

McGill, Nevada 89318

October 28, 2007

John A. Chachas
Steptoe Valley Advocates
800 Avenue G
Ely, Nevada 89301

RE: Steptoe Valley Energy Products

Dear John,

The McGill Town Council would like to thank you for your attendance at their meeting held October 16th to seek support for the proposed power plant facilities slated to be situated in Steptoe Valley north of McGill. Your petition will be placed in the businesses in town, once filled they will be forwarded to you.

McGill will be the first community affected during the construction phase because they are on the "front line". McGill has already begun preparations for those impacts and the town has enjoyed the opening of new businesses as people plan to provide services to new residents. The Town Council has also been discussing annexation of lands surrounding McGill, so they may help provide housing.

Sierra Pacific has presented themselves as "McGill friendly". They have attended several McGill meetings - helped to support the McGill Swimming Pool - paid for utility hook up at the parks in preparation for the Centennial - and has offered their expertise and guidance in any way regarding McGill's proposed annexation project.

The McGill Town Council formally went on record, by unanimous vote, as supporting the proposed power plant(s) in Steptoe Valley north of McGill.

Please contact us if there is anything further McGill Town Council can do to display their support for the proposed energy plants to be situated in Steptoe Valley.

Thanks for your continued friendship to McGill,

Jerry Morrill, Chairman

JM/dm

**RESOLUTION OF THE NEVADA STATE AFL/CIO
IN SUPPORT OF THE ELY ENERGY CENTER**

WHEREAS Nevada's continued growth is creating a ever increasing demand for power, and

WHEREAS we understand the need to reduce greenhouse gasses in a effort to reduce global warming, and

WHEREAS we understand if the Ely Energy Center comes on line Sierra Pacific will have the ability to shut down three of their existing power plants thereby reducing the output of greenhouse gases by as much as 50% from current levels, and

WHEREAS we support renewable energy but realize it will take time and investment to build an infrastructure of renewable energy power plants which will have the ability of fulfilling Nevada's ever increasing energy needs, and

WHEREAS we understand while geothermal is the most dependable and most prominent of the current renewable energy sources, the cost of development for a geothermal power plant is nearly \$7 million per megawatt while the planned Ely Energy Center costs are projected at approximately \$1 million per megawatt, and

WHEREAS ultimately the rate payers in Nevada will pay for the development of whatever source we find to feed the growing demand for electricity, and

WHEREAS the higher the cost to develop the energy source, the greater the financial burden on our members, and

WHEREAS Sierra Pacific has a record of building power plants using Union Labor, and

WHEREAS the Ely Energy Center will create 2500 construction jobs at its peak, and

WHEREAS the overwhelming majority of renewable energy projects are built with labor who do not make a living wage and do not have benefits, and

WHEREAS Sierra Pacific mans their power plants with Union Labor once those plants go into production, and

WHEREAS the Ely Energy Center will create a total of 250 permanent jobs in White Pine County once phase II has been completed, and

WHEREAS the overwhelming majority of renewable energy power plants are manned with a labor force who do not make a living wage and do not have benefits and are therefore a burden on their community for their health and welfare, and

WHEREAS Sierra Pacific is a Nevada corporation which reinvests in Nevada, and

WHEREAS the overwhelming majority of renewable energy developers are not Nevada corporations, in fact most of them are not even being American corporations, and they do not have a interest in reinvesting in Nevada, and

WHEREAS we support affordable energy, and

WHEREAS we support workers being paid a living wage and being provided with benefits, and

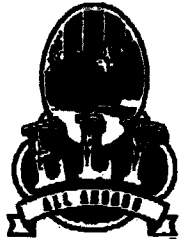

WHEREAS we support companies who reinvest in the state of Nevada over companies which reap profits at the expense of their workers and Nevada's rate payers only to take those profits out of the state, and

WHEREAS we support efforts to reduce greenhouse gases through improved technology and higher efficiency built into new power plants which will allow the decommissioning of less efficient power plants which are releasing pollutants at higher levels; be it therefore

RESOLVED the Nevada State AFL/CIO supports the efforts of Sierra Pacific to construct the Ely Energy Center in White Pine County, Ely, Nevada, and be it further

RESOLVED that this resolution shall be forwarded to those elected representatives who may have concern about this project, to show our support for the Ely Energy Center.

This resolution was approved August 22, 2007 by the delegation in attendance at the 51st Annual Constitutional Convention of the Nevada State AFL-CIO as submitted by the Building and Construction Trades Councils of Northern and Southern Nevada and the Central Labor Councils of Northern and Northeastern Nevada.

White Pine Chamber of Commerce

636 Aultman Street
Ely, Nevada 89301

Phone: 775-289-8877

Fax: 775-289-6144

www.whitepinechamber.com

Email: elycc@whitepinechamber.com

September 24, 2007

To Whom It May Concern:

The White Pine Chamber of Commerce Board of Directors unanimously voted to support all coal fired energy production facilities proposed for Steptoe Valley. This vote was taken at their regularly schedule Board of Directors meeting September 18, 2007.

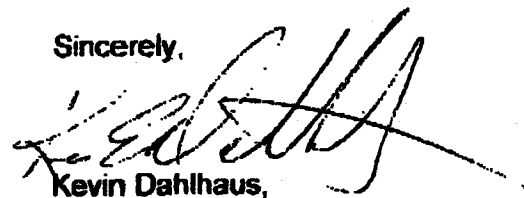

It was noted during discussion the economic benefits of the plants would certainly be a positive economic impact to White Pine County, the City of Ely, and McGill.

It was also mentioned during discussion that the environment would be much better off in the fact that the construction of these power plants would allow for the closure of the much higher polluting power plant located in Moapa, Nevada.

Further positive impacts discussed were the rebuilding of the Nevada Northern Railroad at a cost of over \$150,000,000.00 (\$150 million) and the construction of the Southwest Inter-tie Project at a cost of over \$600,000,000.00 (\$600 million).

The White Pine Chamber of Commerce represents approximately 230 businesses in the City of Ely, White Pine County, and the surrounding areas.

Sincerely,

Kevin Dahlhaus,
President

Evie Pinneo,
Executive Director

KD:ep

RESOLUTION 2007-44**A RESOLUTION IN SUPPORT OF BUILDING COAL FIRED ELECTRICAL POWER PLANTS WITHIN WHITE PINE COUNTY, NEVADA**

WHEREAS, White Pine County has a continued deep concern for its environment and quality of life for its citizens, including air quality and water resources, and.....

WHEREAS, White Pine County recognizes the need to strengthen and stabilize its economy and has worked several years to locate a coal fired electrical power plant to help meet its economic and community development goals, and.....

WHEREAS, the County is currently working with two proposals for siting coal fired electrical power plants within its borders because the development of energy facilities will improve the economic outlook for our community by providing long-term employment with wages equal to the state-wide industrial average and opportunities for advancement, increased business activity, substantial investment, and increased tax revenues required to meet the needs of White Pine County Citizens, and.....

WHEREAS, White Pine County supports the goals of maintaining air quality, pursuing improvements in technology to minimize emissions of pollutants and greenhouse gases, and the need to encourage development of economically viable renewable energy alternatives, and.....

WHEREAS, White Pine County understands the importance of developing new coal fired electrical power plants with the best available control technology to: (1) meet the need for growing base-load demand, to ensure a diversity of base-load power supplies and incorporate renewable energy projects to work towards an overall balanced fuel mix for power generation, (2) to enable utilities to take older coal plants with higher emissions out of service; and (3) to provide infrastructure needed to support smaller renewable energy projects, and.....

WHEREAS, White Pine County fully supports the NEPA processes in place to protect environmental quality, the White Pine County Commission is participating in the Environmental Impact Statement process for both plants as a Cooperating Agency, and throughout that process, the Commission has been impressed with the attention devoted to protecting all aspects of the County's environment and resources.

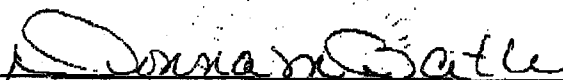

NOW THEREFORE BE IT RESOLVED, that the White Pine County Commission endorses the development of coal fired electrical power plants in Nevada as a critical element in the State's energy development strategy to meet energy demand and encourage the advancement and increase economic feasibility of new technologies and renewable energy projects.

PASSED AND ADOPTED this 26th day of September, 2007.

DONNA M. BATH, Clerk of Said Board

White Pine County Sheriffs' Office Employee Association

October 9, 2007

White Pine County Sheriff's
Employees Association
President Ray Sawyer
PO Box
Ely, Nevada 89315

To Whom It May Concern:

I am writing this letter on behalf of the White Pine County Sheriff's Employees Association. It is our intent to collectively show our support of the future power plants proposed for the White Pine County area. We believe the positive effects of the Ely Energy Center, economic development and financial security, far outweigh the possible environmental concerns that have allegedly given the projects a negative reputation. Our economic dependence on mining has been at times a tremendous cause for concern. The financial independence and diversity that these proposed power plants can offer our community is greatly anticipated by our association.

Sincerely,

Ray Sawyer

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

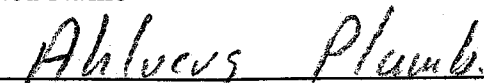

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

To Whom It May Concern:

I am a White Pine County resident and have carefully reviewed the pros and cons of the Ely Energy Center. I think it would be good for our county and community, good for Nevada, and good for renewable energy in this part of the state. Please be as expeditious as possible with your Environmental Impact Statement process. Thank you.

Name JEFF GROTH
Address 208 Arrowhead Circle
Ely NV. 89301

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved – estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved – estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.

- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.

These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

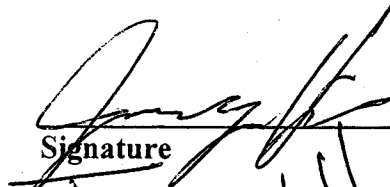

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved – estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

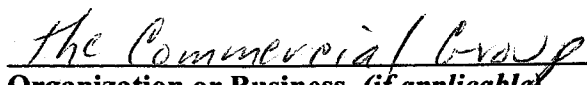

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved – estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

Steptoe Valley Energy Advocates

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved – estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.

October 9, 2007

White Pine County Sheriff's
Employees Association
President Ray Sawyer
PO Box
Ely, Nevada 89315

To Whom It May Concern:

I am writing this letter on behalf of the White Pine County Sheriff's Employees Association. It is our intent to collectively show our support of the future power plants proposed for the White Pine County area. We believe the positive effects of the Ely Energy Center, economic development and financial security, far outweigh the possible environmental concerns that have allegedly given the projects a negative reputation. Our economic dependence on mining has been at times a tremendous cause for concern. The financial independence and diversity that these proposed power plants can offer our community is greatly anticipated by our association.

Sincerely,

Ray Sawyer

- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy. These range from about \$60,000 a year for auxiliary operators, to about \$63,000 for lab technicians, to about \$75,000 for control room operators, to about \$68,000 for mechanics and heavy equipment operators.
- There will be thousands of jobs during the construction phase.
- According to information filed with the state of Nevada, the plants will use technology and will be approximately 95% cleaner than the old copper smelter in our valley.
- The Ely Energy Center will enable Nevada's air to be cleaner than it is today, because Nevada Power will be able to close down three higher-polluting generating units.
- These projects (specifically the Ely Energy Center) will enable significant renewable energy development in this part of Nevada, which will also add to our economy and make our state a better place to live.
- These projects will enable the reconstruction of the Nevada Northern Railway, which can provide additional economic development and diversity.
- These companies are good corporate citizens and will bring many positive contributions of volunteer time and resources.

To Whom It May Concern:

I am in support of coal-fueled electricity generation in White Pine County for the following reasons:

- Our tax receipts will be dramatically improved — estimated to be at least \$50 million a year. That compares to the county's current operating budget of less than \$10 million a year.
- Our economy will be much more diverse and be able to weather the ups and downs of mining.
- There will be hundreds of full-time, high-paying jobs during plant operations that will contribute to the local economy.
